# Ensure your data is protected. Logicalis BaaS portfolio provides peace of mind.

On average, data capacity in enterprises is growing at 40% to 60% year over year according to Gartner. In surveys of mid-sized companies, Enterprise Strategy Group (ESG) found that "time and time again, the top two data protection issues remain keeping pace with data growth and reducing backup and recovery times". Yet, few organisations state that addressing these issues is a Top 5 priority.
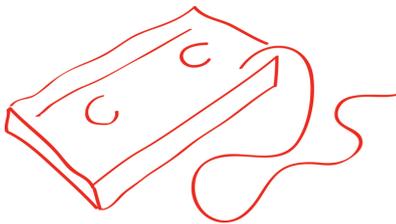

The volume and growth of data is unprecedented, with an exploding backup footprint typically representing 5-25 times the capacity of the primary storage footprint. Amongst other challenges, Australian businesses are also facing increasingly stringent regulatory compliance and IT governance initiatives. The bottom line is that this is putting data at risk – and creating enormous pressure on IT budgets and resources.

However, very few organisations have been able to transform their data protection processes. There is a perception that backup is complex and change will bring unnecessary risk. In short: it's too hard.

Logicalis' BaaS portfolio makes it easy! We allow you to choose the service that best aligns to your requirements, offering both on-premise infrastructure with off-site cloud replication or a Cloud only solution, all backed by 24x7 management. Periodic retoration testing ensures our backups have been completely successful and our SLAs are backed by penalties.

"...most organisations consistently state they have the same data protection challenges, but rarely do they try to approach these issues any differently." – Enterprise Strategy Group

Logicalis understands that customers come in different sizes and have different service requirements and we have developed a backup portfolio that allows you to choose the service that best aligns and addresses your needs, with a simple pricing model based on the volume of data being backed-up.

	BaaS Corporate	BaaS Enterprise
	Designed for small to mid-size datasets with backup SLA's based on backup availability & backup success	Designed for larger datasets (including those with a high rate-of-change) with backup SLA's focussed on restoration
Monitoring	Proactive 24x7 monitoring and management	
Infrastructure	Provisioning of backup and restoration services directly from Logicalis Cloud	Provisioning of local backup infrastructure and optional data replication to Logicalis Cloud
Long Term Retention	Optional tape out and secure storage of protected data	
Connectivity	Private WAN or Internet VPN connectivity option	WAN links (where required) for optional replication
Primary SLA	Backup availability & backup success	Restoration of data
Penalties	Penalties for SLA breaches caused by Logicalis	
Reporting	Comprehensive monthly and ad-hoc reports
